

CoToGAN 2003

3rd International Workshop on Communication TOols for a Global Accelerator Network

October 28-31 2003

Jolly Hotel
Trieste – Italy

The concept global accelerator network (GAN) has found considerable interest in the accelerator community world wide. There have been two study groups initiated by ICFA which were followed by two workshops, one in Cornell in March 2002 and one in Brookhaven in September 2002.

A standing ICFA sub-panel REAP has been formed to foster further activities and the progress on the topic has been presented at the major accelerator conferences in the last 3 years. A number of activities have been started recently. A proposal has been worked out to create a novel, universal communication tool (MVL) to support collaborations to build, test, install, and test accelerator hardware and software which allows the virtual presence of the remote experts at the site of the activity.

Reports on recent experience in remote operations will help in determining these criteria. Information will be exchanged with experts in the field of human-computer communications, networking and communication technology.

Advisory Committee

Ilja Bohnet	ZEUS, DE
Luciano Catani	INFN Roma2, IT
Luca Chittaro	University Udine, IT
Matthias Kasemann	DESY, DE
Stephen Peggs	BNL, US

Roberto Pugliese	Elettra, IT
David Rice	Cornell, US
Simone Richter	GSI, DE
Hermann Schmickler	CERN, CH
Petra Schuett	GSI, DE
Ferdinand Willeke	DESY, DE

Local Organizing Committee

Mariella Antonetti
Fulvio Billè
Stefano Deiuri
Roberto Pugliese (Chair)
Claudio Scafuri
Michele Turcinovich
