

Tango 2 web: a PHP interface to Tango

Main topics:

Security

Tango to PHP bridge

GUI

Other developments

Security

Decoupling: web and Tango must be as separate as possible

Buffered readings: all readings are buffered in an embedded database (SQLite)

Different host: Tango core shouldn't be affected by an overload of the web interface

No writings: writings will be supported in future releases

Tango to PHP bridge

Which connection:

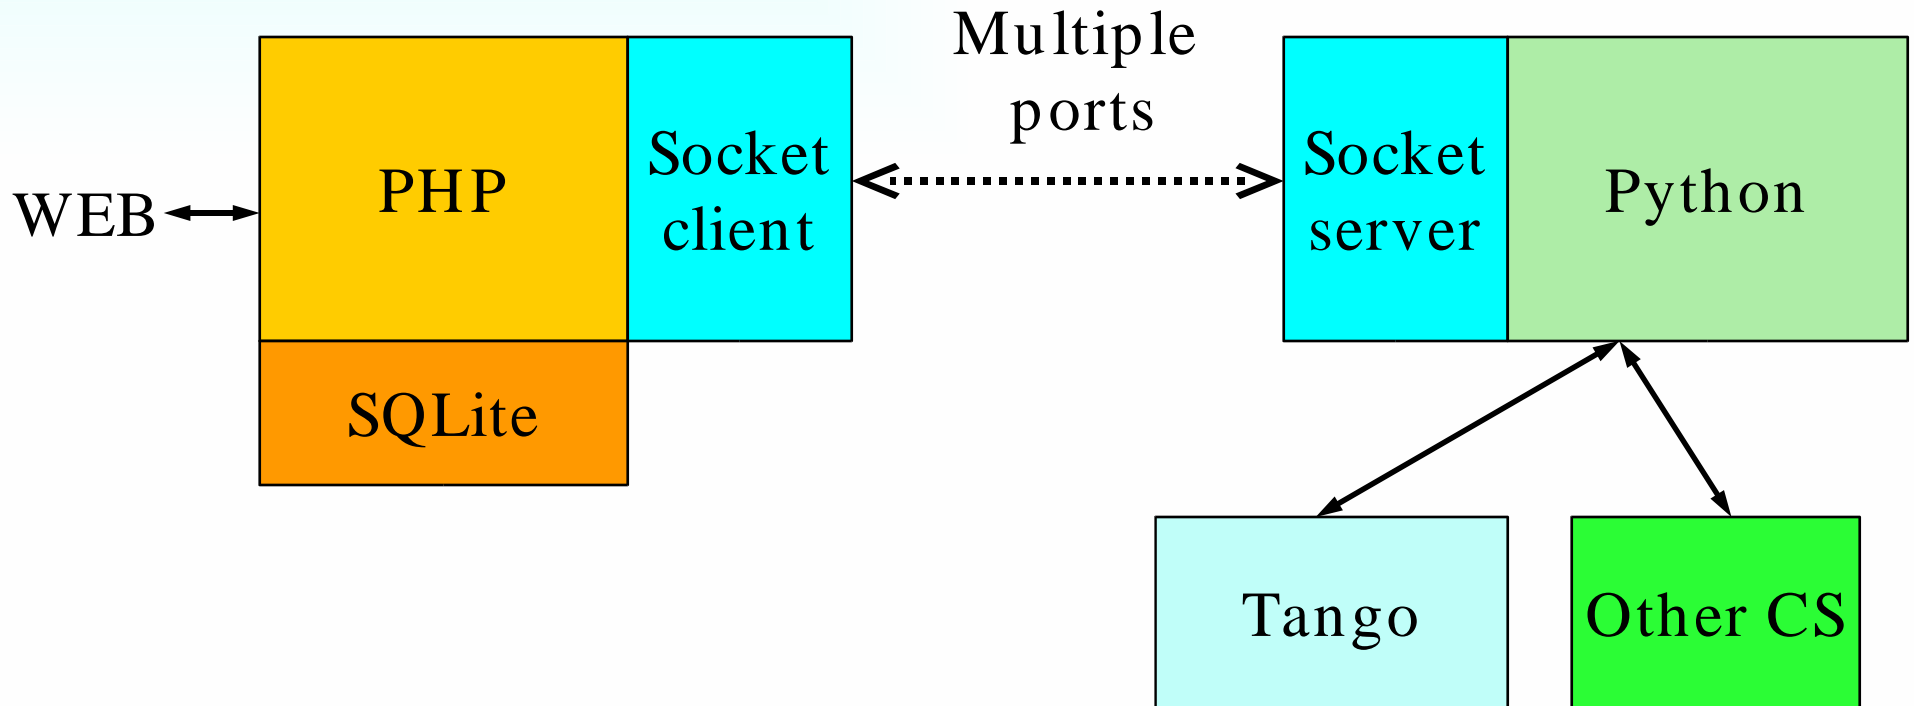

TCP/ IP socket (serialization of data)

PHP binding

Others (connection to HDB, System call, etc)

TCP/IP socket

TCP/ IP socket on multiple ports (multithreaded process)

GUI

Jive-like browser
widgets
